

2015 Winter School in Mathematical & Computational Biology

An Introduction to Galaxy with the Genomics Virtual Lab: workshop information sheet

Hardware

You must bring your own laptop computer to take part in the workshop. Please ensure that your laptop is fully charged – a few power points may be available, but this is not guaranteed.

Software

To access Galaxy, you will need a web browser, but NOT Internet Explorer. Firefox, Chrome, Opera and Safari are all suitable.

Network connection

Before the workshop starts, make set up a connection to one of the wireless networks available in the training venue – either *Eduroam* or *Visitor-UQconnect*

Eduroam

If you come from an institution that subscribes to Eduroam, then please use an Eduroam connection. You should be able to find instructions to configure this at <http://uqconnect.net/helpdesk/wireless/eduroam/> or <http://www.eduroam.edu.au/tools-and-resources.html> - otherwise contact your local IT support desk.

Visitor-UQconnect

If you are not eligible to use Eduroam, you can use the Visitor-UQconnect network. Follow the instructions at <https://www.its.uq.edu.au/helpdesk/connecting-and-using-uq-visitor-wireless>

Support

For support and questions about setting up your laptop for the workshop, contact Mark Crowe (m.crowe@qfab.org / 07 3346 2095 / 0427 450834). Mark will be available during the Winter School, and will also be in the training room from 1pm on the day of the workshop to try to help with any last minute problems.

IMPORTANT NOTE

Please ensure that you have everything set up ready for a 2pm start to the workshop. If you have not set up your network connection or browser software in advance, we will not delay the start of the workshop to assist, and you may not be able to participate in the exercises.
